Tabele Statistice

În acest document ne propunem să prezentăm mai multe tabele statistice utile pentru rezolvarea problemelor de probabilități și statistică.

1 Tabele pentru repartiția normală standard

1.1 Valorile funcției de repartiție

În tabelul următor descriem valorile funcției de repartiție, $\Phi(x) = \mathbb{P}(X \leq x)$ cu $x = x_1 + x_2$, pentru o variabilă aleatoare X repartizată normal de medie 0 și varianță 1. Pentru valori negative putem folosi relația $\Phi(x) = 1 - \Phi(-x)$.

1.2 Cuantilele pentru $\mathcal{N}(0,1)$

În tabelul următor descriem **cuantilele** de ordin α pentru repartiția normală standard, i.e. $z_{\alpha} = \Phi^{-1}(\alpha)$ cu $\alpha = \alpha_1 + \alpha_2$. În cazul în care $\alpha < 0.5$ vom folosi relația $z_{\alpha} = -z_{1-\alpha}$.

2 Tabel pentru repartiția t-Student

Tabelul următor prezintă cuantilele de ordin α pentru repatiția t-Student cu ν grade de libertate. Pentru valori ale lui $\alpha \leq 0.5$ se poate folosi relația următoare $t_{\nu,\alpha} = -t_{\nu,1-\alpha}$.

3 Tabel pentru repartiția χ^2

Tabelul de mai jos prezintă cuantilele de ordin α ale repartiției χ^2_{ν} . Dacă $X \sim \chi^2_{\nu}$ atunci $\mathbb{E}[X] = \nu$ și $Var(X) = 2\nu$. Pentru valori $\nu > 50$ vom folosi formula $\chi^2_{\nu,\alpha} \approx \frac{(z_{\alpha} + \sqrt{2\nu - 1})^2}{2}$ pentru a aproxima cuantilele repartiției χ^2_{ν} , unde z_{α} este cuantila de ordin α a repartiției normale standard.

4 Tabel pentru repartiția Fischer-Snedecor

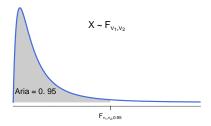

Tabelele care urmează prezintă cuantilele de ordin $\alpha \in \{0.9, 0.95, 0.975\}$ pentru repartiția Fischer-Snedecor cu ν_1 grade de libertate la numărător și ν_2 grade de libertate la numitor. Pentru valori ale lui $\alpha \leq 0.5$ se poate folosi relația $F_{\nu_1,\nu_2,\alpha} = \frac{1}{F_{\nu_2,\nu_1,1-\alpha}}$.

4.1 Cunatile pentru $F_{\nu_1,\nu_2,0.9}$
